Project Topic Proposal

Name : Farzana Sadia Takee
Id: 2211175

1. Title of the Project

Elderly Care Management System

2. What is the problem and what is the impact of the problem?

Elderly people often need regular help with their medicines, doctor appointments, and daily care. Family members may find it difficult to remember and manage all these activities. As a result, medicine doses or appointments may sometimes be missed.

This project will provide a simple web-based system to help family members organize and manage the daily care of an elderly person.

3. Why is this problem important to solve?

Proper care and regular medicine and doctor appointments are important for elderly people. A single system can make it easier for family members to keep track of these activities and provide better support to elderly family members.

4. What are the challenges?

- Managing elderly person information
- Adding and managing medicine schedules
- Managing doctor appointments
- Creating daily care schedules
- Managing emergency contact information
- Designing an easy-to-use interface
- Managing different users such as family members and caregivers

5. What will happen if the problem is solved?

If the problem is solved, family members can easily manage an elderly person's medicine, appointments, and daily care schedule from one platform. It will help them stay organized and reduce the chance of forgetting important care activities.

Main Features

- Elderly profile
- Medicine schedule and reminders
- Doctor appointment tracking
- Caregiver information
- Daily care schedule
- Emergency contacts
- Family member dashboard
